Q3 FY2026 Business Review — Internal

Prepared for: Leadership Team & Board Update | Prepared by: Finance & Strategy

Confidential — not for external distribution

Executive Summary

Q3 was a mixed quarter. Revenue grew 11% quarter-over-quarter, ahead of our internal target of 8%, driven largely by expansion within existing healthcare-vertical accounts rather than new logo acquisition, which came in below plan for the second consecutive quarter. Gross margin held roughly flat at 71%, though we expect some near-term pressure here given the infrastructure scaling discussed in the Platform Engineering section below. Headcount grew modestly, concentrated almost entirely in Platform Engineering and Customer Success, with Sales headcount essentially flat pending a broader go-to-market review that is still underway and not covered in detail in this document.

The Board should note that while topline numbers look healthy, the new-logo shortfall is now a two-quarter trend rather than a one-off miss, and leadership has flagged this as the top strategic risk heading into Q4 planning.

Revenue Performance

By Region

Region	Q2 FY26 Revenue (INR Cr)	Q3 FY26 Revenue (INR Cr)	QoQ Growth
India	18.4	20.1	+9.2%
North America	31.2	36.8	+17.9%
EMEA	9.6	9.9	+3.1%
APAC (ex-India)	4.1	4.4	+7.3%

Note: North America growth is largely attributable to two Enterprise-tier expansions (see Account Health section) rather than broad-based improvement across the region; leadership should be cautious about reading this as a durable regional trend.

By Vertical

Healthcare remains the largest and fastest-growing vertical by revenue, followed by Financial Services, with Retail continuing to lag both in absolute revenue and growth rate. The Retail vertical's underperformance has been a recurring discussion point in the last three QBRs; the current working theory among the account team is that our product's real-time capabilities are less differentiated for Retail use cases compared to Healthcare and Financial Services, though this has not been formally validated through customer research.

Platform Engineering Update

The team shipped the v2 ingestion pipeline rework this quarter, which increased sustainable throughput from roughly 24TB/day to 40TB/day. This came with an operational cost, however: the quarter included a SEV-2 incident (INC-4471, 11 Feb 2026) related to connection pool exhaustion following a routine dependency upgrade, which caused delayed dashboard refreshes for approximately 340 enterprise accounts for roughly 2.5 hours. Full postmortem and action items are tracked separately; as of this writing, two of four action items are complete.

Infrastructure Cost Trend

Quarter	Infra Spend (INR Cr)	Spend as % of Revenue
Q1 FY26	3.8	6.1%
Q2 FY26	4.3	6.7%
Q3 FY26	5.6	8.0%

Infra spend as a percentage of revenue has risen for three consecutive quarters. Finance and Platform Engineering are jointly reviewing whether this reflects one-time scaling investment that will flatten out, or a structural shift in unit economics that needs to be addressed in pricing. No conclusion has been reached yet; a joint recommendation is expected before Q4 budget finalization.

Headcount and Hiring

Department	Q2 FY26 Headcount	Q3 FY26 Headcount	Net Change
Platform Engineering	34	41	+7
Product Engineering	52	54	+2
Customer Success	28	33	+5
Sales	22	23	+1
G&A	19	20	+1

Sales headcount has been intentionally held roughly flat pending the go-to-market review mentioned in the executive summary; this is a deliberate pause, not an unplanned hiring slowdown, though it is worth flagging that some regional sales leaders have raised concerns about this in light of the new-logo shortfall.

Risks Heading Into Q4

Three items are flagged as the primary risks for Q4 planning: first, the continued new-logo acquisition shortfall discussed above; second, rising infrastructure cost as a percentage of revenue, which has not yet been fully explained; and third, the unresolved go-to-market review, which is creating some uncertainty within the Sales organization about headcount and territory planning for the coming year. None of these are considered critical individually, but leadership has noted that the combination warrants closer tracking than usual heading into Q4.
